Education

Izmir University of Economics – Senior-year Computer Engineering Student | 2023-2027

Languages

- Persian: Native language
- English: **C2** Native-like fluency
- Turkish: **C2** Native-like fluency
- French: **A1** Beginner

Summary

In 2023, I graduated 3rd in my school and received a medal from Mimar Kemalettin Anadolu Lisesi's Mathematics department (despite being an international student). I'm currently a third year Computer Engineering student at Izmir University of Economics. I am super passionate towards learning and implementing creative solutions for things around me and I have always been trying to automate processes by using the knowledge I have.

Skills

- **Languages:** Java, Python, C#, C, SQL, JavaScript, PHP, HTML/CSS
- **Frameworks & Libraries:** React.js, Node.js, Express.js, PyTorch, Node-RED, JavaFX, Numpy, matplotlib,
- **Tools & Platforms:** Unity, Postman, MongoDB, Git/GitHub, Matlab, WordPress, Cloudflare (DNS Configuration), Arch Linux, Windows, VS Code, Jupyter Notebook,
- **AI & Machine Learning:** Neural Networks, Data Manipulation, AI Tools & Prompting
- **Embedded Systems:** Arduino, ESP32
- **Network Management & Core Competencies:** CCNA, System Architecture, Algorithms & OOP, Data Structures, Full-Stack Development, REST APIs, Responsive Design
- **Soft Skills:** Team Leadership, Agile Project Management, Effective Communication, Time Management, Class/Group Management, Teamwork, Teaching & Mentoring

Experiences

Ariobashiri.com, Project

May 2026

I developed and published my own portfolio written in **React.js** and hosted on GitHub. I configured Cloudflare **DNS**, a custom **SEO**, and a custom **sitemap**. I also configured **Google Search Console**. This project strengthened my understanding of fully developing a website and serving it to the public.

Egebimtes Bilgi Teknolojileri A.Ş., Izmir

Intern – January 2026 – February 2026

During this project, I gained a deep understanding of system architecture by reviewing existing **C#** software and source codes, and expanded my technical skillset by working with various new tools and applications, including **Postman** and **Node-RED**.

Private Tutor | Freelance, Izmir

September 2025 – Present

Continuous Learning: Reinforcing and consolidating my core computer science, mathematics, and linguistic knowledge by continuously reviewing and updating foundational concepts through teaching.

Mentoring students to support their academic and technical growth, while heavily improving my communication, adaptive thinking, and ability to simplify complex technical topics.

British Town, Izmir

English Teacher – September 2024 – December 2025

Successfully handled classroom management and group dynamics by teaching both child and adult groups at A1-C2 levels under a fast-paced work environment in dynamic classes with up to 12 students. Prepared numerous IELTS students for their examinations.

KBsneak, Izmir

Web Developer – November 2023 - January 2024

Developed an end-to-end e-commerce website (kbsneak.com) from scratch using WordPress and HTML+JS+CSS, targeting the Persian market and listing 150 active products with an optimized user experience.

Webariom, Izmir

Web Developer – August 2023

Developed my own personal website for learning about front-end applications. webariom.com

SUNIC, İzmir

Web Developer – May 2023 - July 2023

Completely redesigned the company's official corporate website (sunic.com.tr) from scratch using WordPress, aligned with modern design trends and user experience (UX) principles.

Delivered a dynamic visual interface and optimized page loading performance by implementing custom CSS and JavaScript integrations.

Ensured the website runs seamlessly across all devices by carrying out mobile responsiveness studies.

Freelance, Germany

Python Project – January 2022 – February 2022

Developed a data analytics and visualization tool using Python (Pandas, Matplotlib) to process large datasets. Enabled the transformation of raw data into meaningful charts.

Networking, Iran

Networking Experience – August 2020 – November 2020

I worked on the site with an Individual network engineer who was setting up the whole company's network. I worked on-site for two months after finishing the CCNA course (self-studied) and learned more about the hands-on process of planning out the architecture of a network, configuring switches, routers, and firewalls, and performing network maintenance and monitoring.

Projects

Unity Game Projects

Jan 2026 – Present · Unity, C#

Four game projects built up to now while learning Unity: A 3D rocket physics game with multi-scene obstacle courses, a first-person shooter with a custom player controller and scene management, an obstacle-dodge game, a hunting game with animations as a gift to my friend, and there are 3 more projects I'm actively working on.

MERN Stack Note-Taking App

Sept 2026 – Sept 2026 · MongoDB, Express.js, React, Node.js

Full-stack note-taking application built as a hands-on project while learning the MERN stack, covering the database, REST API, and React frontend.

Ariobashiri.com

May 2026 · React, GitHub Pages, Cloudflare DNS

Personal terminal/dev-themed portfolio site showcasing projects, skills, and background; deployed with a custom domain and Google Search Console integration.

Exam Planner

Nov 2025 – Dec 2025 · Java, GUI · Izmir University of Economics

Java-based GUI application that schedules university exams based on multiple criteria by processing CSV input files, featuring a clean interface and an efficient scheduling algorithm.

Artifact Application

Mar 2025 – May 2025 · Java, Regex · Izmir University of Economics

Java-based GUI application for managing a filterable, tag-based artifact catalog with full CRUD functionality.

2D Java Game

Sep 2024 · Java, OOP, AWT

A 2D game built with Java AWT, featuring custom-implemented collision detection.

Workflow Project

Feb 2024 – Apr 2024 · Java, OOP, Regex · Izmir University of Economics

Task queue management system supporting FIFO/LIFO scheduling and duration-based prioritization, with data parsed from text files using Regular Expressions.

Blue Jack

Dec 2023 – Jan 2024 · Java · Izmir University of Economics

A 1000+ line Java card game where players aim to reach 20 without exceeding it, featuring a custom AI algorithm for the computer opponent.

Instagram Bot

Feb 2022 · Python

Python bot that automates scheduled Instagram photo posting based on a defined timeline.

2D Python Game

Feb 2021 · Python, Pygame

A Chicken Invaders-style 2D shooter built with Pygame, written in 24 hours.

Telegram Bot

Jul 2020 · Python

Customizable and automatable Telegram bot capable of receiving and responding to messages.
